

Modul využívajúci glitch, ktorý 072 opampy robia, keď sa signál približuje k railu (iirc iba negatívne).

cca schema

in → fullwave2halfwaves → limiter (1/2 ne570) na -5v → gain na -12v → tl072 → attenuation na 5v → sum → out

1. > limiter (1/2 ne570) na +5v → inverting gain na -12v → tl072 → inverting attenuation → sum1
